Profile summary

Aspiring Artificial Intelligence & Data Science undergraduate with a strong foundation in programming, electronics, and real-world system development. Hands-on experience with Arduino and ESP32-based projects, including RFID attendance systems, IoT automation, GPS-based RC car navigation, and smart relay boards. Proficient in C/C++, basic Python, embedded systems, sensors, and Wi-Fi-based data logging with platforms like Google Sheets. Actively involved in building practical, problem-solving prototypes and exploring applications of AI, automation, and smart technologies. Passionate about learning, innovation, and applying technical knowledge to develop efficient, user-centric engineering solutions.

Education

- **Bachelor of Technology** 2024–2028
Chandigarh Group of Colleges, Jhanjeri
Pursuing
- **Secondary School Education** 2024
Pioneer Convent School, Fatehabad,
Haryana
Percentage: **64%**

Projects

RFID based attendance system [🔗](#)

- Developed a system using IOT integrating both hardware & software
- Designed features for marking Attendance , real-time data logging in
- Focused on **reliability , cost efficient**
- **Tech Stack:** C , C++ , Arduino IDE , ESP WI FI

Smart Tracking fan [🔗](#)

- Built a working Prototype of Smart fan
- Implemented algorithms to track human presence
- It will run on that side where someone is available
- **Tech Stack:** C , C++ , Embedded System , Arduino IDE

RC car

- Developed an RC car which we can control with Smartphone using IP Address .
- Showcased skills, projects.
- **Tech Stack:** C , C++ , Embedded System , Arduino IDE

Skills

- **Technical Skills:** C++, Java, HTML , C++ , Git, GitHub, MySQL
- **Soft Skills:** Leadership, Problem Solving, Teamwork, Communication, Adaptability, Time Management

Projects, Experience & Participation

- Developed an **ESP32-based RC Car** controlled through a **web IP address interface**, enabling real-time wireless navigation and control via a browser-based system.
- Designed and implemented a **Smart Electric Switch Board**, converting a traditional switchboard into a **home automation system** using IoT technology for remote and automated control.
- Solved **100+ coding problems** across platforms (LeetCode, Hackerrank).
- Built an **RFID-Based Attendance System** to automate attendance recording, improve accuracy, and reduce manual effort using embedded systems.
- Developed **Smart Tracking Fan**, an automation-based project presented at **CGC J Ideathon 2K25**, securing **3rd Position** with the team for innovation and practical implementation.
- Participated in **Hackstrom (Internal Smart India Hackathon)** at college, gaining hands-on experience in **problem-solving, ideation, and team-based product development**.
- Served as **Technical Head** at **Wiztron Club** for **2 months**, leading technical activities, mentoring peers, and contributing to project execution and innovation initiatives.
- Currently undergoing an **Internship/Training Program in IoT & Robotics** as an **Unpaid Intern**, actively working on embedded systems, automation, and real-world hardware projects (*valid till 28 February 2026*).
- Attended multiple **technical workshops and hands-on training sessions** focused on **IoT, robotics, embedded systems, and emerging technologies**.

Certifications & Workshops

- **Infosys Springboard Certification** — Completed industry-oriented courses focused on technical and professional skill development.
- **Certificate of Participation – “Build with AI 2025”**, Chandigarh — Participated in an AI-focused event emphasizing innovation, emerging technologies, and practical applications.
- **National Science Day – Project Participation Certificate** — Presented a technical project, showcasing innovation, problem-solving, and practical implementation skills.
- **5-Day Hands-On Technical Workshop** — Organized by **CEC**, gaining practical exposure to real-world technical tools, systems, and applications.
